# Maximizing the Benefits of Repositories for Research Institutions

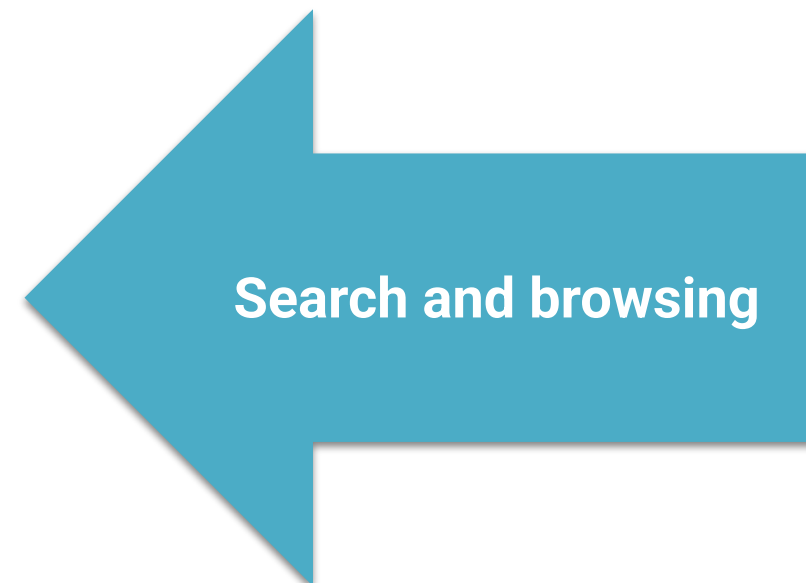

Milica Ševkušić  
EIFL

25 February 2025

# Digital repository?

- An online platform that collects, preserves, and provides access to scholarly content
- Not an ordinary website or an in-house database!
- Can be institutional, national, disciplinary/thematic

Actions you may perform on this task:

If you have reviewed the item and it is suitable for inclusion in the collection, select "Approve".

If you have reviewed the item and found it is **not** suitable for inclusion in the collection, select "Reject". You will then be asked to enter a message indicating why the item is unsuitable, and whether the submitter should change something and resubmit.

Select this option to change the item's metadata.

Return the task to the pool so that another user may perform the task.

Determination of particle size distributions by laser diffraction

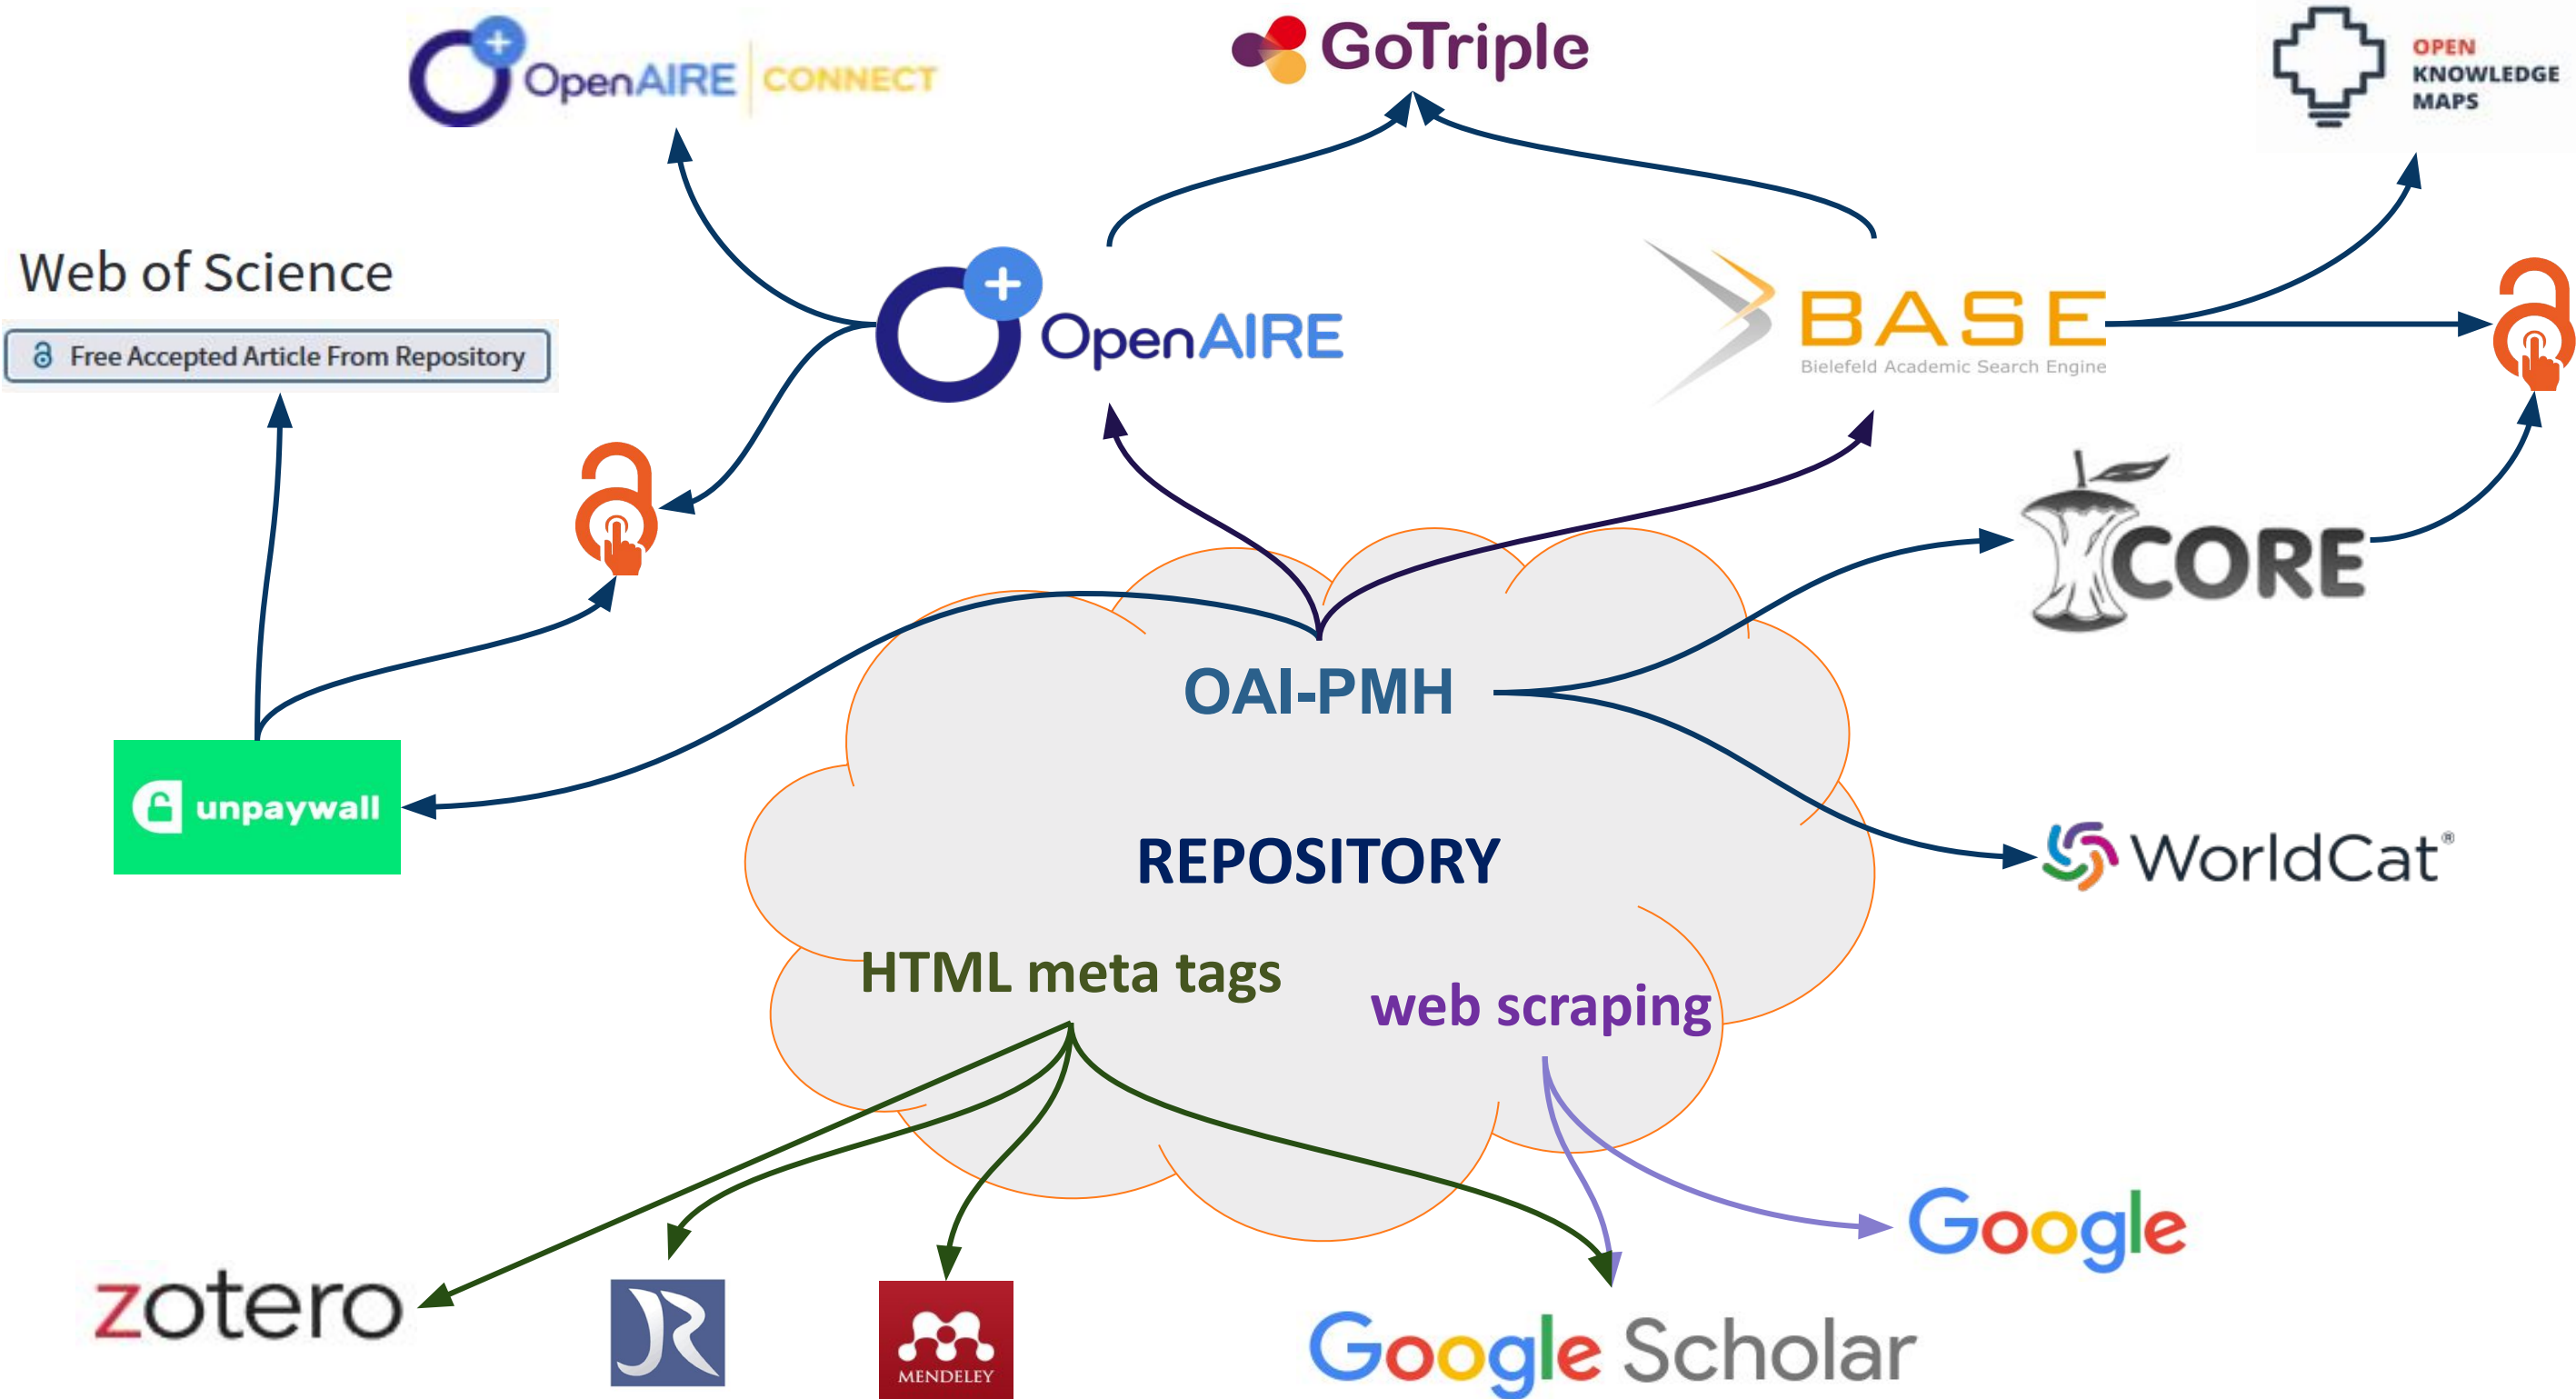

ZS Stojanović, S Marković... - Technics–New Materials ..., 2012 - vinar.vin.bg.ac.rs

The paper deals with the main principles of determination of particle size distribution using Mastersizer 2000, Malvern Instruments Ltd., UK. On the example of several problems we ...

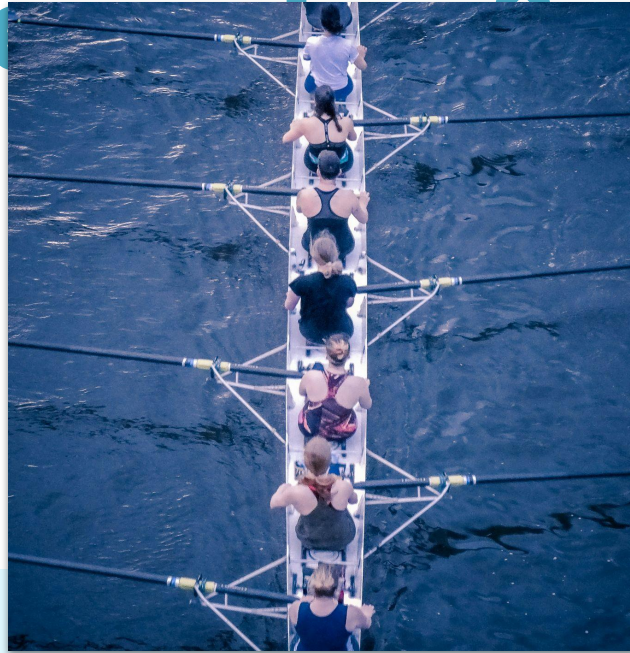

☆ Save Cite Cited by 117 Related articles

A paper published in a local print-only journal was made available in a repository. Thanks to this it was possible for potential readers to find (and cite) it.

# Visibility of repositories

# Why is it good to have a centralized

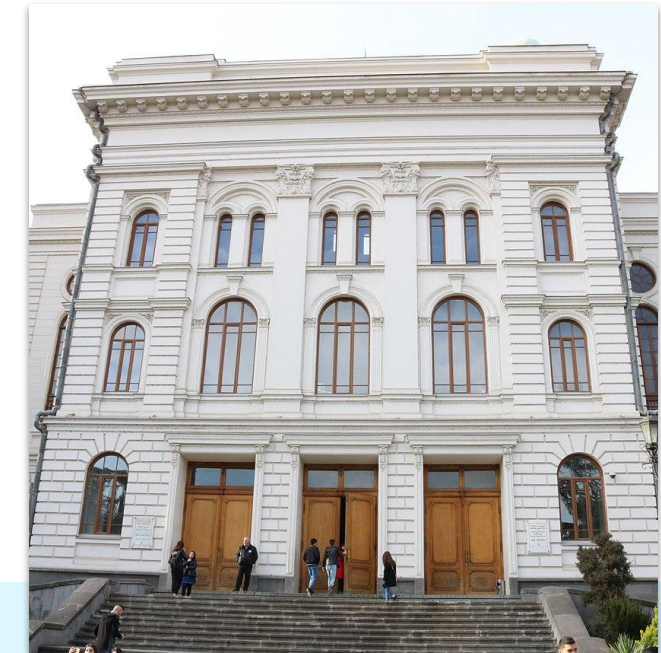

## Coordination

- Standardized metadata
- Consistent curation practices
- Avoiding duplication of effort (e.g. if a publication has authors from different institutions, there is no need to deposit it in multiple repositories/collections)
- Preservation is easier

## Saving institutional resources

- No need to invest in equipment, services and staff necessary to develop and maintain an institutional repository
- Reduced administrative burden (service provision management, contracts, financial management, etc.)

## Distinct profile

- Institutions have their own collection and can organize their content
- Institutional profile
- Researchers grouped by institution
- Research outputs grouped by institution
- Persistent identifiers assigned to deposited research outputs

# Integrate the repository into institutional workflows

- Use repository data to generate reports
- Deposit master and PhD theses in the repository
- Deposit publications necessary for accreditation and promotion procedures in the repository
- Find/provide resources for university courses
- Instead of compiling a list of publications on the institutional website, provide a link to the repository

# How to contribute

## Now

- Adopt an institutional open science policy that would require researchers to make their publications available in the repository
- Insist on depositing the full text of publications
- Collaborate with libraries and publishers to collect available digital-born and digitized publications that can be deposited in the repository
- Require researchers to provide links to the repository in their bibliographies and reports
- Collaborate with the repository team

# How to contribute

## After the end of the project

- Allocate local staff to manage institutional collections and provide training to end users
- Advocate for a national funding model to ensure the sustainability of the repository
- Include the repository in research assessment procedures

Thank you!
